

May 2012

Pathology Experts is full participating partner in this EU supported project (*Histopathologic & Mechanistic Assessment of Angiogenesis Inhibitor Related Toxicities: An EU FP7 Industry-Academia Partnerships & Pathways (IAPP) Funded Project*) investigating possible histopathology findings associated with treatment by an anti-angiogenic compound currently on the market. We provide input and expertise regarding microscopic examination of tissues and potential mechanisms of toxicity, plus we provide critical input for necropsy and tissue processing. The project duration is from 2010-2014.
